

Photo report V19:

Project WIAP-KFKOK Vietnam,

*"Education for every one" Secondary school of southeast area mechanics and electricity at Thien Tan commune. Created: 01/13/2012
Saigon, Iris and HP Widmer*

Photo 1: Our 21 A and 25 B apprentices (46 total) must make this time a large amount of tests.

Photo 2: This case, for example, outline of 3 pages by hand, without a ruler.

Photo 3: We think if we take seriously each apprentice, give them the confidence that they are very good.

Photo 4: There are many trainees who work on homemade tables, then later the weight of her table to work out exactly to the gram. And they can do it? Our goal is that all the correspondence between theory and practice in their blood when they have finished the lesson.

Photo 5: Severe School with regard to practice. This time, No. 1 draw freehand, elevation, floor plan and site plan.

Photo 6: Here we have opened the room 5, where all the goods which were in the container No. 8 was stored. Now we unpack. At the back of the cardboard boxes the more than 200 000 face masks.

Photo 7: The apprentices in the time when we were not in Vietnam, not worked intensively on the two vertical lathes WIAP DM 2V on. But now it's starting again.

Photo 8: On second Monday when we were in Vietnam, the teacher invited us. Director Bang on the left and on right, our coordinator Hieu Le Tung was among them.

Print Screen 9: Here is the testimony, Director Bang and we make together. The grades are determined according to our system with 20 points maximum. Minimum 12 points are necessary, that you get a diploma for the teaching passed on to us.

Print Screen 10: We give the certificate to the trainees. Signed by Director Bang, Vietnam Ministry of Agriculture and by us.

Photo 11: The day before, our coordinator Tung Le Hieu and Iris and Hans-Peter Widmer, meets the chairmen of Dong Nai province, Mr. Dinh Quoc Thai. We have agreed to give the 216 000 pieces of face masks we have in our school. The General Director of Dong Nai hospital Phan Huy Anh was there also.

Photo 14: Almost all the apprentices we have gathered to make a photo. In the middle, the people from the hospital, Dong Nai.

Photo 12: Here we load the face masks (6 m/3) paid by the company Biola, Switzerland and 13 case of bandages (0.6 m/3) from "Helpingman" Zofingen, Switzerland.

Print Screen 15: This is the delivery confirmation for 216 000 face masks

Photo 13: They had to load up on the roof that there was room on the bus.

Photo 16: The Helpingman from Zofingen has besides many others, some office supplies given. This may very well be needed in the school. The apprentices have great pleasure in sorting.

Photo 17: On the New Year we have the apprentices of group A given 1 million dong (50 CHF) and the apprentices from group B, every 20 000 dong (10 CHF)

Photo 20: We asked them to bring some bandages and face masks in there's poor province. There's a medical station, where they live. We gave them 4 with boxed goods.

Photo 18: There are always three apprentices had to check the amount and then sign it.

Foto21: It was 13:30h. 15:00 h they left and went off their bus.

Photo 19: The 3 Camau apprentices we have paid for the bus ride, that they could go home on the "TET". One way cost: 220 000 dong, so we gave them each 700 000 Dong.

Photo 22: Our 3 drilling machines. The median is the new that we brought from Switzerland. Specifically for cut thread. These we bought in Ricardo CHF / USD 800, -. The trainees have good refurbished. Machine type Coradi Spain

Photo 23: we bought this old milling machine in Ricardo. Because on the bottom sticks out a spindle, we had to make a stand, that the machine is approximately 250mm above ground. For us it is important that the trainees learn: even with older machines can live with that.

Photo 26: He might be our smallest apprentice in the B group. Rear panel where you can see it's for a training place with control CNC SINUMERIK 810.

Photo 24: For nearly 3000 USD, we have brought steel and sheet metal from Switzerland. It is a bit tedious to drive around in Saigon to buy goods, we have bought in Switzerland.

Photo 27: The whole transport material we brought from Switzerland.

Photo 25: Even the round material stand we took from Switzerland. Plastic and 6 square much material

Photo 28: Now we can transport material with two racks, have much better order. It is important that the trainees learn to live with good order.

Photo 29: The big wrench to wrench size 90, we have in Vietnam in the school.

Photo 32: How the crane is hung up, it was a great mystery to the teachers and trainees.

Photo 30: Today on the last day of school operation before the holidays our chief teacher Robinson.

Photo 33: Here we have bought in the center of Saigon large sturdy wheels for our 2 ton crane. A piece cost 700 000 dong (30, - USD)

Photo 31: Here we add the 2 ton crane to be able to decrease by mass. We will make a useful, good drawing for the new crane.

Photo 34: Everything what is blank, the apprentices had to now with an oil-rich former fat mixture and cover with oil paper.

Photo 35: Even our camp in the assembly has been painted against rust.

Photo 38: So now is only filler and a lot of folders in the room. Which can only be cleared when the frame in the area of the construction is finished.

Photo 36: The bolts store and measurement tools was made lockable. We will try to give two apprentices responsibility for the camp. There is a computer with the warehouse management on Excel.

Photo 39: This frame is stripped, because it has a few small repairs needed. But then we make the same two frames. The good thing: make themselves, make mistakes, makes nothing, the only way for learning think ahead.

Photo 37: Now is finished externally with the goods to get out of.

Photo 40: The two long racks in the electrical room are ready too.

Photo 41: The construction is also getting better and better. The benches and tables, "Made in Vietnam" are (from us) and they did not even wobble.

Photo 42: We got nice new computers from the Basel economic development agency. Very well, thank you. They are the nicest and greatest that we have now in school. The wheelchair in the rear, is included in our project.

Photo 43: All of our drawings, many of our large lathes, vertical lathe, the gantry loader and the many conversions were wrapped with oil paper. Unfortunately, the roof is not very tight and sometimes it rained.

Photo 44: These are pieces of metal of our expansion plant WIAP LC05. The last few weeks, the apprentices turned scrap and we have told the head teacher Robinson, that it is no longer allowed. If we do something, we only make products that can be used. You can make 5 or 10 units LC5. Vices for other educational workshops. Even wheelchairs can make it, but no products that can not be used.

Photo 45: Here is a generator we were able to buy in Switzerland in Ricardo for a few hundred francs with 400 volts. 6,5 kW.

Photo 46: In our office closet are many measuring tools. There are many thousands of francs for measuring equipment in our school, with which you can only teach and work, if you have them.

Photo 47: Our tap collection.

Photo 48: Before the "TET" we have covered our office place against the dust.

Photo 49: Today is 13/01/2012 and the 23/01/2012 is the big "TET" festival (New Year) in Vietnam. We have apprentices, which coming about 2000 km from here. That they can go home, we conclude that a week before the "TET", the school, so that all trainees have time to come home.

Photo 50: This should be the new document frame. Unfortunately we have to dismantle it after the holidays again. It must be made chances. We want that the drawings are sent to approve.

Photo 51: Here we drink beer before going home. Everyone will have fun and they say thank you to us.

Photo 52.: Again raise the beer can and a Prost. Until next year for them now we hattten already a few days ago.

Regulation Vietnam:

TET:

First day in New year: with their parents (2012 = 23.1.)

Second New Year's day at the in-laws

Third New Year's day visit the teacher.

(A few want to visit us!)
