
Photo report V22:

Project WIAP-KFKOK Vietnam

Project Vietnam: Now 34 days in the school
Minus the number of holidays. This has increased in
Vietnam.

Start form 03/26/2012 till 30/04/2012

*"Education for every one" Secondary school of
southeast area mechanics and electricity at Thien
Tan commune. Created: 30/04/2012*

Tu Duc, Vietnam Saigon iris and HP Widmer

Create and present: Iris and H.P Widmer

Photo 1: Left our director Bang right: coordinator Le Tung Hieu. There was a meeting. When are the papers of Hanoi? It was all clear. The flags on the table we bought many years ago with the kids in America. They accompany us forever.

Photo 2: With this car and driver, we drive 50 minutes every day 2 about 38 km, round trip. Our property is located approximately between Saigon and the Center School.

Photo 3: Now no longer have the apprentices wash their hands on the floor. 4 water taps are available to them.

Photo 4: So it looks like when we come on Monday morning. The office is covered because it is very dusty. We have no air conditioning. Often it is almost 40 degrees in the office.

Photo 5: Finally finished our archive. It is lockable.

Photo 8: This student teacher supporter A24, make the absence leaves. These go to the Ukraine, where our coordinator Aliona makes the points administration. With a regulated number system.

Photo 6: The view from the window also shows the nature. At the bar sits a lizard.

Photo 9: This apprenticeship will count all expenses since we are here together. It is important to us that the boys also get the paperwork knowledge.

Photo 7: Compliments to our B group. They have received an award in a competition. They are very proud and so we to.

Photo 10: That the machine building has a lot to do with sheet metal work is a fact. That is why our apprentices must also make all the plates themselves.

Photo 11: This is the gallows for the DM2S machine. All positions of the machine should be able to be easily operated. The high we are reducing by 200 mm compared to Europe.

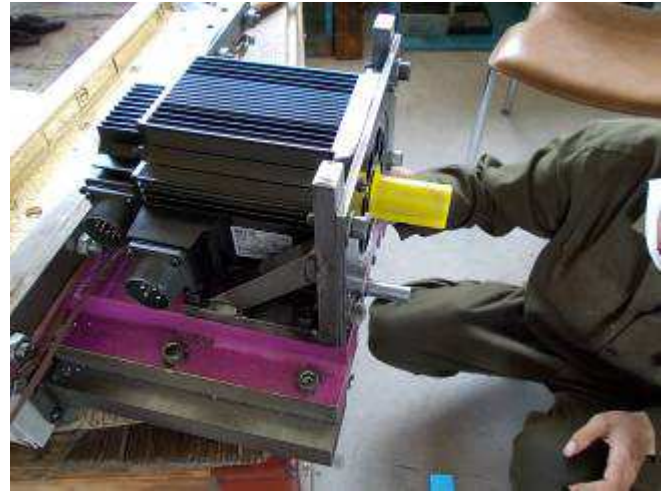

Photo 14: The X motor is now mounted on the cross slide.

Photo 12: This is the cross-slide of DM2S drilled. The next time we have a regulation table, so that everything can be put into the water.

Photo 15: The X engine fitted done.

Photo 13: Conscientiously work boys. The eye issue is still not good.

Photo 16: The tailstock robust, heavy. With side guides mounted 8 x M16. Now scrap then.

Photo 17: Yes, in Vietnam is all a bit dusty and dirty. We have to keep clean. Even the rust has to be considered good.

Photo 20: Tapping M20 by hand. This gives strength.

Photo 18: The cooling water tank is to DM2S machine. All designed for the 2-meter-plate machine.

Photo 21: The vertical lathe WIAP DM2V No. 10 023, is also running soon. Here, A9, Hieu. He works very active and is also a good teacher supporter.

19th photo 2 pallet the apprentice need for to work in the vice.

Photo 22: The DM2V No. 10 022, needed more time to prepare for them. But that's good. With so many apprentices have, to have jobs, so they can learn something. This machine has been almost completely dismantled in order to fit it.

Photo 23: The grippers of the WIAP DM2V No. 10 023, has sporadically jammed. Now it is broken.

Photo 26: Our 2 ton crane: still not ready.

Photo 24: The A18 apprentice. He has worked the last time only electric and has learned a lot. We will dig him as a supporter electricians next trip. Since we have no teachers with electric field of study.

Photo 27: There are apprentices, and if you can not practice, you do not learn it. But it is good.

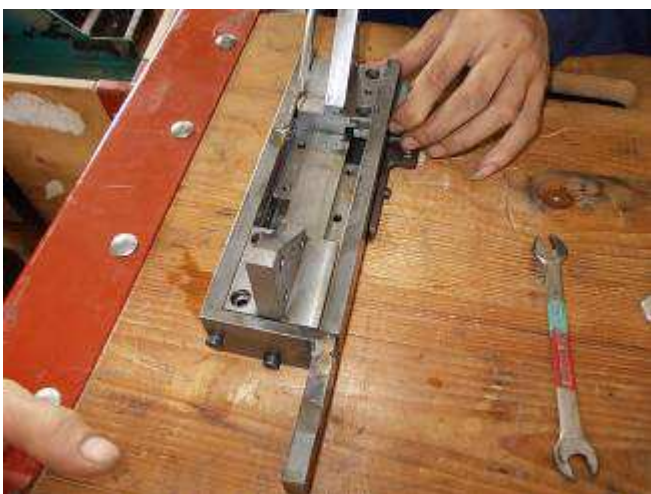

Photo 25: The gripper is mounted together again.

Photo 28: Here is the crane mounted.

Photo 29: Now they have brought us to show: Yes, the crane runs. And he runs.

Photo 31: Now, we raise the bed of the S DM2. We must have a solution for filling. The filler concept, we have changed something with the filler. There are 2 pieces 800 mm crane increases.

Photo 30: Test weight. Existed, but it rocks a bit when he slows down the side. We strengthen a little.

Photo 32: Here is an apprentice at the smallest machine. The DM2 B, which is a mini slant-bed machine, making a sketch, how to fasten the screw spindle.

Photo 30: Here is further reinforced by welding, also a supporter of teacher.

Photo 33: Here Iris and HP Widmer were in a photo shop to make passport photos. On top of the screen an old camera. But it goes very quickly. Within minutes, he has rejuvenated us in the photo by 20 years

Photo 34: The day on Vietnam's roads. Thousands of motorcycles.

Conclusion trip März_April_Mai 2012

This trip was for us the best we've ever had in Vietnam. Something disturbing was the many holidays. By that we selected 6 teacher supporters, we were able to relieve the teachers. More are planning to move to something ahead, as we do.

Nevertheless, we have no electrical training staff, we were able this time electric, make a big step forward. Two vertical lathes have a good scheme. There is an old scheme, we have new much simpler methods, but can be very complicated,

apprentices each wire to pursue and realize what is a circuit.

For us it was a great pleasure also to see that finally have not only worked 3 groups and 20 apprentices clean in a room. We have achieved in approximately 25 working days very much. So much that we now know that even with two such operations, a group together, where you can quickly move rocks.

We will have more small group work. The work they have begun to make ready to leave. In order for the trainees after that what they have done, can also look with pride. The teachers tend to like, simply divide each morning and then knowing who started what is now, not doing what the other one yesterday. But this is not in the often very difficult work.

At the time when we are not in Vietnam, we are only reduced work on the machines. We will prepare a lot for the start of the new 25 apprentices in the summer of 2012.

That is interesting. End of August, we have then nearly 75 apprentices. What we recognize as well. The boys have such great joy in the work they are doing, thinking about what we cooperate. This is the way to a bright future.

End of the trip Photo Report No. 3 of March, April, May 2012
