Photo report 28.04.2015 "Hans-Peter Widmer"

P1 arrival our 3 guests from Angola. Links Carlo. Middle, Litto, right Alberto. They came via Dubai to Switzerland. On Saturday afternoon, 25.04.2015, at 14.00 h, they were here.

P2. Photo behind the Federal Palace in Bern.

P3 Sunday 28.04.2015 exit after Bern. Visit the Houses of Parliament. Explanation of how the Swiss parliament works. Grand Chamber, small chamber 7 federal councilors u.s.w

P4. The Swiss National Bank. The explanation of what happened a few days ago with the euro. From 1.2 fell down to 1. The decision came out of this house.

P5. Rear the coffee house where the national councils supposedly go often and determine what they want to choose Bundesrat. From time to time even across party lines.

P6. Also training without safety shoes, without warm clothes is not good. We went to the Landi, bringing good clothes 100% cotton and steel toe shoes

P7. Also green pants and a good quality shirt 100% Cotton.

P10. Tuesday the boys have all day training. You need to learn weights and the lever principle.

P8. Measuring at 0.01 mm accuracy belongs in our teaching program. Because to not only hundredths but thousandths are detected.

P11 The young Lito, who was only 2 years ago to is required to calculate the weight.

P9. Well, they were able to recognize 15 microns difference well. "Hats off" the can not some Swiss!

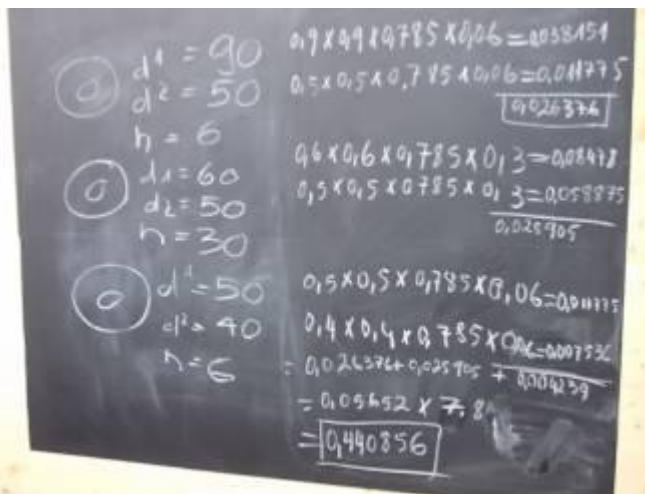

P12 The teaching space is also a place where the right practice can be learned. No schoolroom as is customary.

P13. This work had to calculate precisely the boys grams. Then the control with the balance.

P16. Every morning drinking the obligatory coffee before school starts, so that the boys do not fall asleep while learning the same.

P14. More than the gram thousandth of a gram, they have expected. All right.

P17 On Saturday 02/05/2015 we first visited the Rhine Falls.

P15. On 30.04.2015 it was still 20 degrees. We wanted the trip to Hungary do on May 1st. But the rain the next few days and a temperature drop to 8 degrees the next day, kept us from. We had the boys from Ukraine clothes delivery, let raussuchen some clothes. They would otherwise be frozen.

PS: Have 1 but still bought every few new jeans and casual shoes.

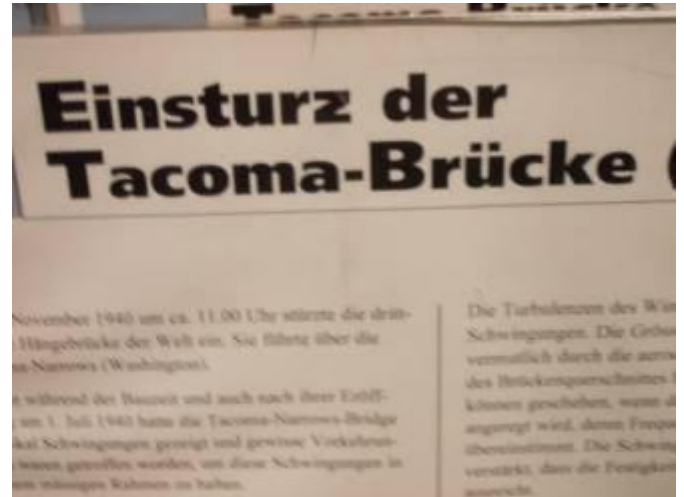

P18. It rains endurance record up to 100 liters m / 2 hour in the night and suddenly the sunshine. Blessing in disguise

Subscribe to our free [Newsletter](#) for teachers and be informed "automatically" by email about our new offers, courses etc., or browse through our [Newsletter archive](#).

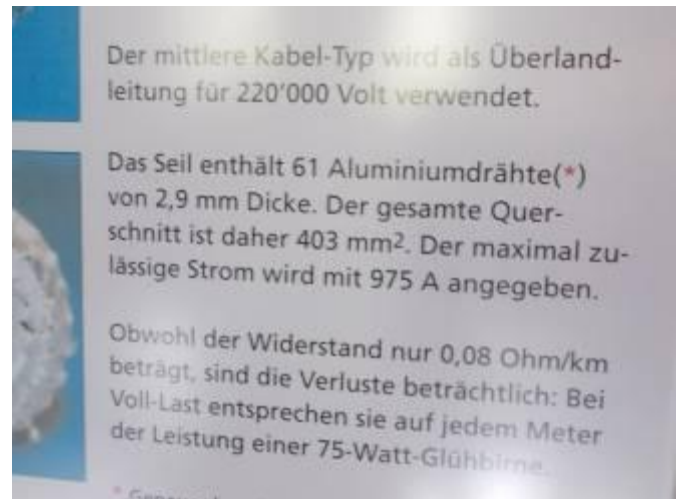

P19. Amazing how they drive the Swiss boat under the Rheinfall. These are adventure trips. Heard new to the program. If that would see the Americans that the people trained in Angola, they would do the headstand, when something like this happens without life jackets. If there is a tree trunk or come down a bit would I do not know if such a thing can always turn out well.

P19 Technorama information. On Monday morning, which was discussed by what was happening, what a movie was released.

P20. In Winterthur Technorama then Saturday was noon. Lots of good info. Unfortunately, everything was a bit dark for good photos.

P20. Powerlines with 330 000 volts, 220,000 volts or 110,000 volts were well represented. Also an issue that belongs in our teaching program

The Technorama is unique in Europe scientific learning center with over 500 interactive exhibits. In a playful way of experiencing ...

Schools are welcome to the Technorama. The Technorama sees itself as an educational institution that wants to support the schools in the natural sciences - and to each grade, from kindergarten to university.

Consider the Technorama as a resource for teaching! There are hundreds of scientific phenomena available, the pupils experience, can discover and explore - many of them in such a way as they can hardly be implemented in the school. Dedicate yourself to such experiments for even a whole day, and without the usual hour - with or without class.

Take advantage of the information offered here for a visit with the class, the training courses, the introductions to the "use" of the Technorama, the taster visits and and ...

P21. Also on Monday morning, they wanted to throw all the bottles in our trash. But the boys had then separate the

trash from the bottle and throw the glass into the glass container.

P22. 4.5.15 Since the hard training continues. Measuring with micrometer. Tolerance study leaves, H6, g6 u.s.w. It's not easy when giving the normal schools in Angola too little logical thinking further, then it is up to us to catch up. If patience is there, no problem.

P23. 5.5.15 As our boys do a lot for the support, V-belts and timing belts are an important issue. Today they had the morning to learn belt dimensions, and looking out. Then another 45 learn to dessert all Helicoil from M1.5 to M.

P24. Tuesday afternoon was scheduled to visit the foundry Wolfensberger. It is the world leader in ceramic casting. It can be poured into 0.1 mm accuracy. Even Japanese and Koreans are customers of yours. Hats off.

P25. From left, the third, our friend Theo Schmid Hauser, co-owner of the foundry Wolfensberger. We had been together over 30 years ago in Sweden.

P25 Here is a photograph of the sand foundry. We have put all the safety shoes. We want to be a good role model.

P26. Unfortunately, we could not see the casting of 1600 degrees hot steel. But behind is still the Chill the sample held in 1608 degrees it was hot. The special here in the foundry Wolfensberger could now see our boy from Angola, why all these additives such as manganese and Nikel etc. are needed. If you consider that the two young men left, Lito and Alberto, the first time were allowed to leave the country from Angola 10 days ago, we are pleased when they see not only tourist places.

P29. Drive over the Oberalpass

P30 The first time in their lives to Alberto (center) and Lito (right), touch the snow.

P27 outing Sunday, 5/10/15. Andermatt Devil's Bridge

P31. The journey continues over the Lukmanier Pass, Grisons - Ticino

P32: In Ticino arrived Muralto Locarno

P36 Very high wall, the dam Versasca.

P33 Salametti eat

P37: The man jumps in the depth of 220 meters. Carlo says, not of 20 000 USD It would do that.

P34. Then look at the James Bond Place. 220 meter jump.

P38. Here is the description of the power plant from the dam

P39. It is part of the training that our Angolans understand what happened there.

P40. If already the dam will be visited and the guests can not show the beautiful water on, something is not ok.

P41 So now the guests are tired. You want to go to sleep back.

P42. The long driveway weekend we had to do something. Tour Germany, Austria, Hungary, 3 times to sleep in another hotel. Visit Budapest, Citadella 05/16/2015

P43. Beautiful view in Budapest

P44 All around Budapest can be seen.

P45 Many buses come and bring tourists

P48. Rear Schönbrunn Palace. Carlo laughs again, any message from HP.

P46. Stay at Győr. Here we ordered a Wiener Schnitzel. Very large! It was very tender.

P49. Why the horses have white ear protectors, they could not imagine anything. When we said that the mosquitoes do not go in the ears, he understood it immediately. Anyway, if you come from a country where it has some mosquitoes!

P47 On Sunday morning at 06.00 Tagwach, breakfast, then departure to Vienna. Schönbrunn Palace

P50. In Vienna in the center next to the Opera House was good- coffee we drank in the Opera House. They settled with Mozart models photographed for Facebook. Return on the day in Switzerland. Total about 3000 km away. They were pretty geschlaucht.

Accommodation guest house Upper Sumpfstrasse 11 CH
5745 Safenwil, Switzerland:

P51 House where guests have stayed with family connection

P54: Separate shower for two

P52: Bedrooms Alberto and Litho, bed Litto.

P55: dining table

P53: Bedrooms Alberto and Litho, bed Alberto

P55A: sleeping place for Carlos, double bed above.

P56: The room has a shower and toilet

P59: the evening or over the weekend was almost always eaten with the family at the big table. The three guests were grateful eaters. Most of all everything with lots of spice, sauces and olive oil. The sauces consumption was in the month where the guests were there, at least as much as we normally eat in a year.

P57 kitchen with dishwasher, washing machine and dryer separately for guests. 2 x they cooked themselves once breakfast and once fish on a Saturday lunchtime.

P60: Exterior of the training workshop WIAP

P61: The training workshop WIAP is well equipped for the training. There are measuring tools, general tools, machinery, standard parts and other paraphernalia in a workshop.
